

## Recommendation Letter

To Whom It May Concern

Mr. Damian Pieta worked for our sub-supplier Energotest on the site of the Waste Water Treatment Plant Katowice from May 5, 2008 till the end of 2008. We have experienced him as reliable, very dedicated and professional employee of our subcontractor. His positive attitude even under difficult conditions and his command of the English language made him an especially valuable member of the team working on site.

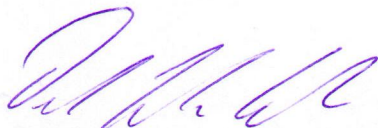

During the execution of the project there were several difficult commercial and technical issues that were controversially discussed between our companies. Mr. Pieta clearly stated his point of view about the situation but we never had the feeling that he was not interested in finding a mutually acceptable solution. We appreciate this regardless of the fact that the outcome of these disputes was not always as we wished.

It was a pleasure for us to work with him and we can recommend him for any role for which he is qualified and for which he has the necessary level of experience as an engineer.

Among other things Mr. Pieta was responsible for the execution of the following works on the site of the Waste Water Treatment Plant Katowice.

- Start up and commissioning of the switch gear stations
- Start up and commissioning of the main power inlet transformer stations
- Commissioning and defect removal for the main control cabinets during the mechanical commissioning period.
- General trouble shooting for the electrical works

We thank Mr. Pieta for his productive cooperation and wish him the very best for his professional and private future.

David John Cook  
Project Manager
